

PRESS RELEASE

June 27, 2024 Brussels

Final Stakeholder Meeting with DG- AGRI

On June 27, 2024, AGRICORE had the honour of presenting our agent-based simulation tool to DG AGRI, the end user of the tool. This milestone marks the culmination of 4.5 years of dedicated research and development aimed at transforming the assessment of agricultural policies.

Our agent-based modelling (ABM) tool is designed to provide a comprehensive and detailed analysis of agricultural systems and policies. Built upon a robust architecture, the tool ensures a high degree of precision and usability across various countries and policy scenarios.

The final presentation at DG AGRI underscored AGRICORE's potential to contribute to agricultural policy assessment. By leveraging modern ICT tools and advanced modelling techniques, AGRICORE offers a powerful platform for ex-ante analysis, helping policymakers address complex agricultural challenges with greater precision and confidence.
